

To: All Statistical Plan Reporting Companies

Date: September 7, 2018

Bulletin No: GISA 2018-02

GISA is pleased to announce the implementation of changes to the Automobile Statistical Plan (ASP) which are being implemented effective May 1st, 2019 and are effective on all premium and loss transactions reported with a Policy Effective date of July 1, 2019 and later. These changes are the result of a careful and thorough consultation process involving industry representatives, Provincial Regulators and Rate Boards.

The Provincial Regulators and Rate Boards all view the ASP as being critical in carrying out their regulatory responsibilities. The review of the ASP was conducted to ensure that the business definitions of the automobile data collected are clearly understood, in order to ensure accurate reporting by insurers. The Provincial Regulators and Rate Boards require the data reported under the ASP to be accurate and reflective of industry results.

The changes being introduced effective May 1st 2019 have been approved with these goals in mind. Please refer to the attached document titled **"ASP Data Elements Review – Final"** for details around the definition changes being mandated. There will be changes made to both ASP edits and ASP anomaly rules within the GISA Portal. It is the responsibility of each ASP reporting insurer to reflect these changes in their respective business processes and systems.

In addition, to ensure consistent reporting across all ASP reporting insurers, GISA also requires insurers to report all data in accordance with the ASP definitions, not as they individually rate.

As always, we encourage you and your staff to work collaboratively with our statistical service provider, IBC, in order to ensure that the data each ASP reporting insurer submits to GISA remains at the highest level of timeliness, quality and accuracy.

Regards,

General Insurance Statistical Agency
